Turn key solution with custom hardware and software

Solution scalable to varying number & kind of machines

On-device compute available

Use-case

Hey Plant manager, how many hours in a day are the machines actually cutting the metal

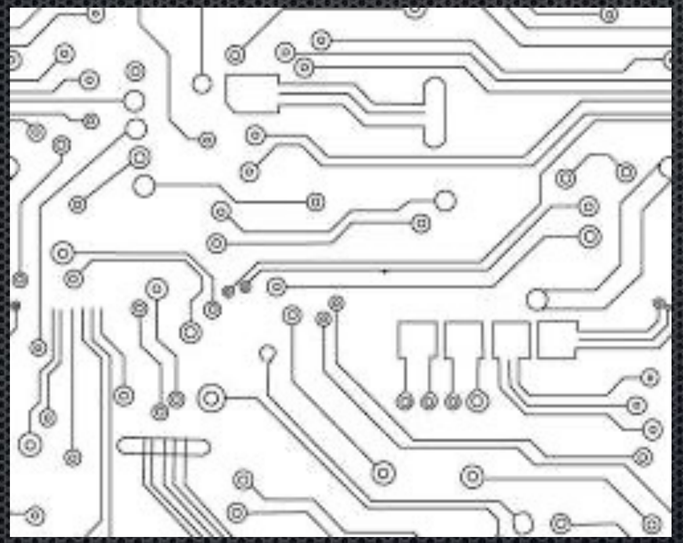
For all 300 machines, I have no idea!
Why do you ask though?

To increase the Production capacity by 30%, do I need to buy more machines or can achieve it with the machines we have?

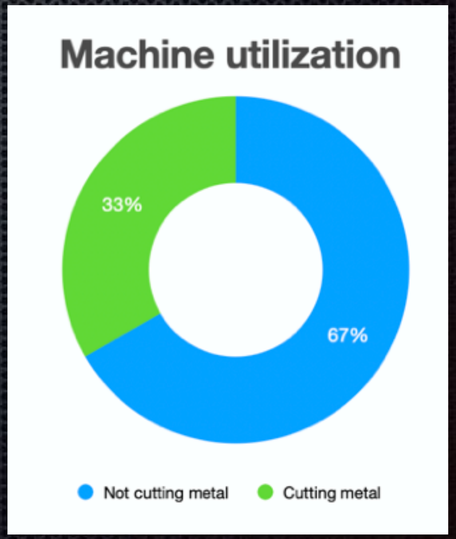
Good point! If only there was a device that could determine utilization of machines!

Solution Workflow

Machine
(Physical System)



VibTronics HW &
SW Platform



Machine State
Prediction
