Cloud hosting data

Machine condition evaluation

Predictive maintenance

Use-case

Hey Plant manager, how many hours in a day are the machines actually cutting the metal

For all 300 machines, I have no idea!
Why do you ask though?

To increase the Production capacity by 30%,
do I need to buy more machines or can
achieve it with the machines we have?

Good point! If only there was a device that
could determine utilization of machines!
